

SF6 Three Opposite Rolls – (DD)

SF6. Three Opposite Rolls (DD)

Presentation created by Eladi LOZANO and LACÔME Roger

Description presented differently and no unofficial.

SF6: Three opposite Rolls (DD)

K Factor = None

Specificities:

- During the second roll the MA must be in inverted flight when it crosses the centre line.
- The elapsed time from the beginning of the first to the end of the third roll must be at least 4 seconds.

Description:

- In a **horizontal** trajectory MA flies for a minimum of 10m then performs a full roll in any direction followed immediately by a centred full roll in the opposite direction followed immediately by a full roll in the same direction as the first full roll and exits the manoeuvre.

Penalty specific to this manoeuvre:

- If the rolls are not performed in a continuous sequence, this will result in a downgrade from 0.5 to 2 points per straight line depending on its length.
